Ask cportal ai for clarity

students

See subjects they are doing

See their grades

See their fees payment status

Ak cportal ai for clarity

bursar

See students and their classes

See student fees status

Update student fees status when they pay

Ask cportal ai for clarity

It helpdesk

- Monitor logins to system

- Monitor suspicious activity

- Lock out users ,

- Reset credentials

- Maintain database security

- Update database

- Ask cportal ai for clarity

To note :

Since this is just a simple project :

We will assume :

1. all payments are made in usd/zig
- 2.the school isnt a government school
3. the school staff is limited
- 4.the students are at most 500
5. individuals have average computer knowledge ,dont need complicated ui Systems hard to navigate.

How are parents added to system

If they apply for enrollement

They are given usernames and login credentials(they cant change these)

They can track enrollment status in their dashboard

Once enrollment period ends all parents
Removed from database

Any issues ask ai then it helpdesk

How are students added to system

Upon successful approved enrollment on cportal
By admin.

They receive credentials they use username
and password

They can change password not username

They can see their subjects and grades if
they ,paid

Any issues ask ai then it helpdesk

How are teachers added to system

Once hired teachers are added by admin

Classes they must
teach are assigned by admin

They are given login credentials ,they cant
change username but can change
Password.

Can update grades of their students

If any problems ask ai then it helpdesk

How are bursar added to system

Once hired bursar are added by admin
Given login credentials by admin
Their job is to manage fees status for students

Once student pays they update fees status

If any problems ask ai then it helpdesk

How are admin added to system

Admin are the people running the school
At the time ,

They are added by it helpdesk
Given login credentials they cant change
Username but can change password

Manage teachers/students/parents/bursar

Are super users in the system

If any problems ask ai then it helpdesk

How are it helpdesk added to system
Once hired they take over system
They are the highest superusers
They monitor overall activity in portal
Are there to ensure portal is always running
They are there to detect issues and enforce
Security
It helpdesk are personel with basic it
Understanding personel small private colleges
can afford, enough to pair with ai to solve issues
If ai fails to solve solutions they recieve
Problems from users
If cportal ai fails , and help desk fails ,issue
Is forwarded to proffessional it company

It help desk

There to ensure consistancy,accuracy and ensure

System works well and produces results

Can modify system database according to laws

There for security and compliance

There for training users of portal

Cportal ai

Ai to help portal feel less techy and more user Friendly

An assistant to help users navigate portal and Troubleshoot minor issues

First port of call for issues before it helpdesk

Use of groq apis utilising powerful ai models , to make portal feel simple and usable.

Ai first uses info that has been fed into it before Rushing to internet

On Every page of ui ,so that its accessible
